Professional skills

- Use vue+elementui+vue-cli to develop, be familiar with most components of elementui. Use it to develop the agility and repeated componets
- Proficient understanding of HTML5/CSS3, including flex layout, float and position. Have the ability to reproduce the prototype correctly and accomplish the requirements.
- Use echarts to make charts, Use it's own api to complete the drill down function.
- Encapsulate axios and use it to send request. such as add token to request headers, add time stamp as payload to the request, intercept the response and handle the it according to different states
- Use vuex to store the data which was used in multiple pages
- Familiar with react and antd
- Fluent in Egnlish(both verbal and writing)。

Work experience

2018.11 - 2019.04 Shanghai linktou company --web

2019.07 – until now pingan technology (outsourced worker) --web

Project experience

1. Consultant management system

Use vue+elementui to develop the project. It was designed to provide a platform for the consultant to fill in the working hours, and the manger will have a clear cognition of his/her subordinate staff are free or not.

2. Hyper Process Automation

Use vue+elementui+vue-cli2 to develop the project. Complete the personalized requirement of the page according to the needs of the PM.

The whole layout was made up by two parts, on the left is the navigation bar which has a fixed width, on the right we have the breadcrumb navigation, router tags that can be scroll horizontally when it was scrolled.

Use the vuex to restore the data like token, in order to use them in multiple pages.

Encapsulate the request and distribute them to corresponding js files, when we have reduced the amount of page coding, meanwhile also easy to maintain.

Education

2013/09–2017/06 Nantong University
